

Opening a text file in Notepad:

1. Click File on the menu bar, and then click Open.
2. Locate and then open the folder that contains the text file.
3. Click the text file's name and then click the Open button.

Opening a text file in Microsoft Visual C++:

1. Click File on the menu bar, point to Open, and then click File.
2. Locate and then open the folder that contains the text file.
3. Click the text file's name and then click the Open button.

Opening a text file in Code::Blocks

1. Click File on the menu bar, and then click Open.
2. Locate and then open the folder that contains the text file.
3. Click the text file's name and then click the Open button. If the "What to do?" dialog box appears, click Open it inside the Code::Blocks editor, and then click the OK button.

Opening a text file in Dev-C++:

1. Click File on the menu bar, and then click Open.
2. Locate and then open the folder that contains the text file.
3. Click the text file's name and then click the Open button.
